Highly Precise Built-In Electronic Thermostat (THA) for OFM baseboards

The THA option offers you several advantages:

With a more precise temperature reading, temperature regulation is better which provides greater comfort.

Temperature variation is limited to +/- 0.5°C.

Desired temperature is maintained even with a huge temperature drop outside.

This control can provide reduction of the electricity bill.

It meets the requirements of Quebec's law C828-13 on energy efficiency and energy savings.

Field or factory installed.

IMPORTANT: The OFM's junction box has been modified to fit with the THA. Therefore, the control is not compatible with devices made before 14-10-2019.
